

About European Aerosols

European aerosols Group, the European market leader in aerosol solutions and touch-ups.

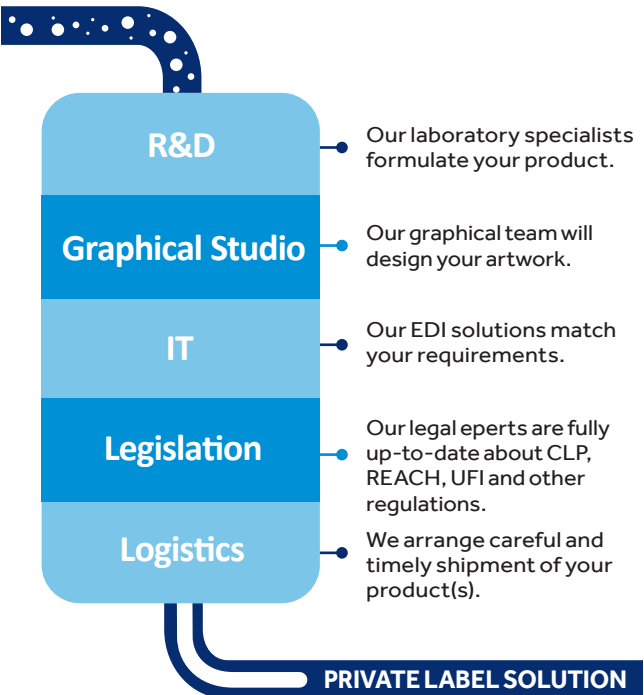

With the brands MoTip, DUPLI-COLOR, presto, ColorMatic and ColorMark we are primarily active in the automotive, the do-it-yourself and the industrial markets with a large assortment of aerosols. Varying from high quality professional lacquers to more technical products, such as brake cleaners and silicone sprays.

As a result of the lasting experience and the high level of know-how, we are thoroughly specialized in the development, production and distribution of aerosols and touch-up pencils. Putties, brush cans, triggers and bottles complete the total concept.

In close cooperation with our customers, we work on the development of new concepts and product solutions.

leading in spray solutions.

Private Label Solutions

European aerosols offers a wide variety of products within the following sectors:

Automotive

Industry

Paints & varnishes

The assortment ranges from decorative paint spray to professional car lacquers, from putties to fillers, from high quality technical sprays to top grade industrial products. Evidently, we offer all of these products as a private label solution to you, our customer. Starting from an existing product and adapting it to your brand requirements, or creating an entirely new product, it is all possible!

Customised solutions

With our wide-ranging portfolio of formulations and aerosol components (e.g. cans, caps, nozzles, etc.), the creation of customised product solutions is a central part of our scope of capabilities.

To create your solution, we will harness our expertise and experience in the most optimal way. In joint project work, we define requirements, create samples, conduct testing and make modifications for further improvement. IT related challenges, as well as legal and logistical aspects, are carefully considered. For that purpose, we rely on the expertise and knowledge of our central services.

Our solutions are perfectly adapted to your needs.

Create Your Product With Us

We also offer the possibility to have your paint filled in a 12 ml touch-up.

From Start to Shipment

Start

1. Complete requirements document

The process starts by filling out a 'complete requirements document', containing all specifications of your product. This first and important step is the foundation for all the following steps.

2. Formulation and sampling

Next, the concretisation of the product starts. Our lab works on the formulation and sends you the first samples of the product for you to test. At this stage, our legislation experts also provide the safety data sheet (SDS) of the product.

3. Testing

According to your feedback on the samples you received, adjustments are made, until we reach the perfect result.

4. Article data entry

As soon as you are satisfied with the created product, it is also put into our data system. All details for production and logistics are entered, in preparation of the following steps.

5. Artwork and ordering material

Our graphics department takes care of the lay-out of your product for you or implements your own. All required legal texts and icons are added, so your product is in conformity to all current regulations. The product is now ready to be ordered.

6. Production

When we receive your order for the product, it is entered in our system and scheduled for production. Your contact at the Back Office can inform you about the current lead time.
